

KING AIR 350

KING AIR 350

The King Air 350 is considered the King of King Airs. The best executive turboprop in its class, the King Air 350 has a specially designed noise control system that cancels propeller noise. The King Air 350 can fly into shorter runways combining comfort, speed, performance and economy. The squared-oval pressurized cabin provides ample head and shoulder room and the double club seating arrangement encourages group or individual work. An enclosed lavatory is in the back of the aircraft.
